Experience

Savannah Marie Massage - *Development QA Engineer*

December 2020 - Current on Call

Creating wire comps and getting approval from clients.
- Keeping communication with my client and their needs with Cost and Design.
- Developed using Node.js React.js HTML CSS and deploying it on AWS.
- Setting up a versioning with GitHub and an easy deployment with AWS and storing images in S3 bucket.

TVGLA - *Development QA Engineer*

January 2017 - December 2020

- Oversee the testing and validation of TVGla projects ranging from web based apps, social networking/content delivery sites to online interactive systems, AR and VR.
- Review both functional and technical specs to formulate test plans and test cases.
- Juggle multiple projects from different Clients such as HBO, Sony, Fox, Disney, Universal and many other companies and technologies
- Self sufficient working from home and learning new skills and keeping up with QA process such as ADA compliances

Age of Learning - *Development QA Analyst*

March 2013 - October 2014

- Received official training in Agile methodologies and worked on a cross–discipline Scrum and Kanban team to produce features for mobile and desktop clients for ABCMouse.com and launch 5 affiliated mobile applications with multiple application versions.
- Provided coverage for the entirety of the QA process before release including the Demo, Alpha, Beta, Release Candidate and Marketing build processes by independently managing and testing 6 apps and all versions with version control.
- Utilized SQL in order to test marketing events in the database and Postman to verify API calls
